

Products FM Radio Modules

HF

Radiometrix HF radio modules deliver reliable operation in the 27MHz band across global markets. For demanding environments, our very-narrowband HF receivers feature industry-leading sensitivity down to -130 dBm

VHF

Very High Frequency (VHF) radio modules provide the best operating range for fixed wireless telemetry and/or telecommand networks due to the relatively lower path loss, combined with the higher receive sensitivity of the narrowband systems required in these bands (assuming the necessary aerials can be accommodated).
