

# Applications

Radiometrix Modules are used in applications which require high-reliability and are performance critical. Applications for our products are vast & diverse. Here are just a few examples, reflecting the depth of expertise we have built over 40 years.

## Aerospace & Defense

A huge number of potential applications; RF modules may be incorporated into detonators, used in covert communications, military airfield lighting control, mine clearance, target practice, and tracking, amongst many more examples. There are also many marine applications such as Man Overboard Systems.

- Training & Simulation Devices
- Shooting Range Target Equipment
- Breach and Ordinance Disposal Initiators
- Automatic Identification System (AIS)
- Man overboard systems
